

## Description

This “XML Feeds” module automatically generates “Prestashop” products and categories xml feeds. With this module you can share your database with other persons. If your database is big, you can enable cache. If the data is confidential you can add password on your xml feed. You can show only this fields, which you wish. You just need select fields and enter a name (or leave default). Using affiliate systems can provide different prices to different users. You only need to enter the formula for calculating the price (ex. Price + 5).
